Date created: 13/03/2020 – Rev.6

Page 3 of 13

1.-PURPOSE

In the context of the healthcare emergency caused by the COVID-19 pandemic, a preventative action protocol is established and implemented that allows for the operation of our activity by guaranteeing the food safety of our products, safeguarding the health of our company's employees.

2.-SCOPE OF APPLICATION

This procedure applies to all areas, processes and to all personnel who work at our company:

- Personnel of Carniques Celrà, SL.
- External couriers who have access to our facilities for product delivery or collection.
- External companies that carry out work at our facilities, such as pest control, maintenance, cooling equipment, laundry or others.

3.-REFERENCES

- Action protocols prepared by the Spanish Ministry of Health to combat the COVID-19 pandemic.
- Recommendations and preventative regulations prepared by the WHO to combat the COVID-19 pandemic.
- Action protocol from the Occupation Risk prevention company.
- Coronavirus control guidelines for meat companies, issued by the People's Republic of China on 21/07/2020.
- "Good practice guidelines for its application to the contingency and Covid-19 control protocols of pork companies authorised to export to China" on 30/11/2020.

4.-RESPONSIBILITIES

Responsibility is shared between the following departments:

√ MANAGEMENT

As head of the organisation, it is also responsible for the implementation and correct application of this preventative measures protocol.

Management will procure and provide all the necessary resources for this protocol to be put into practice and it will ensure that the measures implemented are effective.

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 4 of 13

✓ **PRODUCTION**

It intervenes directly to ensure compliance with internal regulations and to carry out entry checks on personnel and operational controls.

✓ **QUALITY AND ENVIRONMENT**

It must review this protocol and the relevant procedures that may affect it.

It logs the registers for this procedure.

It forms and establishes the crisis team that is made up of the department heads affected.

Through the associations Anafric, Anice and our Occupational Risk Prevention company, Ergolaboris keeps us informed of any updates to regulations on actions regarding COVID-19.

5.- EXECUTION

Our company has a Quality and Food Safety management system in place in accordance with the BRC, IFS and ISO 22.000 standards.

According to our crisis procedure (P-015-01), the crisis management team is formed by a department manager. Therefore, the COVID-19 crisis management team consists of:

Name and surname	Capacity
Xavier Roca	Management
Adrian Dudila	Production Manager
Sandra Fabregat	Quality Manager
Jordi Llinàs	Sales and Logistics Manager
Jordi Pla	Maintenance Manager

In order to establish a protocol with the preventative measures, we have reviewed all the procedures that we already have in place and which are currently of particular importance and must be monitored and strengthened as far as possible.

a. RULES FOR ACCESS TO FACILITIES TO BE FOLLOWED BY ALL PERSONNEL

Before entering the facilities, the managers of each area will:

- Check that the schedule of entry to the facilities is respected, observing the 2-metre safety distance.
- Employees will disinfect their hands with a hydro-alcoholic solution.
- Check that employees are not showing symptoms compatible with COVID-19 (coughing, sneezing, etc.).
- Ask employees if they have been in contact with anyone who is unwell, is suspected of having the illness, or who has symptoms.
- Body temperature will be taken with a facial recognition and automatic temperature screening system.

The temperature must be $<37.2^{\circ}\text{C}$ to be allowed access to the workplace; if access is authorised, a surgical mask will be provided. If the recorded temperature is higher than 37.2°C , access will not be granted and the individual must go to a medical centre. This temperature will be logged in register R-015-02.

In order to facilitate entry and access checks at the facilities and common areas, entry to the frozen section, packaging section and special produce area will be delayed by 30 minutes to avoid the concentration of people at the entrances and exits and to maintain safety distances.

On 04/08/2020, after receiving the Coronavirus Control Recommendations, drafted by the People's Republic of China, we have implemented the following control measures:

1. Personnel exit and entry control measures.

After a period of absence due to holiday or sick leave, the worker must submit the result of a covid-19 screening test before he or she can begin working. The worker can only be reinstated if the test result is negative.

In the event of testing positive, medical instructions must be followed. In the event of an increase in significant cases, a screening process shall be carried out by department or sections, which will be determined alongside the health authorities.

A record of this data is kept.

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 6 of 13

2. New worker control measures.

All new workers must submit the result of a covid-19 test before he or she can begin working. The new worker can only begin working if the test result is negative. All respective data must be recorded on a computer.

b. PROTECTION EQUIPMENT AND UNIFORMS FOR PERSONNEL

Once entry by the operative to the facilities is authorised, they are provided with:

- 2 surgical masks (mandatory use).
- Gloves.

With regard to work clothing:

- Each operative has a personal locker allocated to them in the changing room, where their work clothes are separated from their everyday clothes.
- Each day, the work clothes section will contain the clothes to be changed into, which have been washed and disinfected by Bugaderia Nuria. The work clothes are placed in the changing room lockers on a daily basis using protective gloves. At that time, an inspection is made to ensure that there are no everyday clothing or personal effects. If this is the case, they are removed.

Bugaderia Nuria is the company that carries out the cleaning and disinfection service for the work clothes. The change continues to be made daily and ensures a wash temperature of above 60º for at least 10 minutes with approved detergent-disinfectant.

c. RULES OF HYGIENE AND SPECIFIC HYGIENE PRACTICES TO BE FOLLOWED

We ensure that, in addition to the measures already established in the CBPH (code of good practices for hygiene), we comply with the following:

1. All plant personnel must pass through the hand and shoe disinfection area.
2. We oversee and ensure the correct handwashing protocol: approximate duration of 40 seconds and carried out always
 - At the start of the working day.
 - On returning after a break or absence from the workplace.
 - On returning after going to the bathroom.

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 7 of 13

- After touching external packaging material.
Hand washing instructions are found on the changing room wall.
- 3. After washing, we dry our hands using paper towels. And we disinfect our hands using approved hand sanitiser.
Plant personnel have automatic disinfectant dispensers at the sink in the entrance and the sinks in each of the work areas.
Administration and maintenance personnel have been supplied with disinfectant gel. They must use it after washing.
- 4. The minimum safety distance of 2 metres is maintained between operatives in the work areas and the dining room.
The essential industrial nature of Càrniques Celrà, SL has obliged us to maintain high levels of production to guarantee the supply of meat in the Food Chain. We have had to adapt jobs and the pace of work to this condition.
This condition means there are jobs where we are not able to maintain the approximate 2-metre distance due to the design of the production equipment and systems.
In these cases, employees have been provided with the necessary PPI to reinforce their protection: masks and gloves for daily use.
- 5. Stickers have been placed on the tables in the dining room to indicate which chairs can be used so that safety distances are respected.
- 6. Each operative has a locker in the dining room solely for storing their personal food. Sharing food or cutlery is prohibited. These lockers are cleaned and disinfected daily.
- 7. The lids of the bins in the dining room have been removed to avoid soiling our hands.
- 8. Administration staff:

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 8 of 13

- Cannot share office material, computers or telephones. Each employee has their own material and hydroalcoholic solution to disinfect it with.
- The use of protective face masks is obligatory
- Tables have been placed at a 2-metre distance between workers.

Personnel breaks have been modified to avoid gatherings in the common areas.

d. CLEANING AND DISINFECTION OPERATIONS

Proquimia is the company that advises us and prepares the Cleaning and Disinfection Plan for our facilities.

With Proquimia, we have reviewed the current Cleaning and Disinfection Plan for our facilities:

- ✓ All the disinfectants that we are using are virucides, in accordance with the classification of the Ministry of Health of the central government.
- ✓ We have reinforced the plan with the following operations:
 - Disinfection of the dining room and toilets after each work break. 4 times per day for each shift. This is logged in the register: R-014-02-06.
 - Disinfection of the inside of containers before filling with the ASEP-TA-35 disinfectant product by PROQUIMIA; authorised by the Spanish government's Department of Health. They are registered in the shipment's control log.
 - An environmental disinfection of the most at-risk zones in terms of the presence and movement of people occurs once a week:
 - The carving and packing rooms
 - Dining room
 - Changing rooms and access passageways

with the virucidal ASEP-TA-35 product by PROQUIMIA; Authorised by the Spanish government's Health Ministry. Registered in: R-14-02-07.

- Additional disinfection of the administration area: keyboards, desks and material.

In addition to the daily cleaning of this area and equipment carried out by the cleaning and disinfection personnel at the facilities, each user is responsible for disinfecting their own material, cleaning and disinfecting it twice throughout the working day with approved disinfectant.

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 9 of 13

The Cleaning and Disinfection personnel at our facilities are an in-house team and they are trained annually by Proquimia. This training is carried out in February each year.

We supervise and verify the cleaning and disinfection to order to ensure its effectiveness. The following checks are made:

- ✓ Daily supervision of cleaning before the start of the working day: visual check of the state of cleaning and integrity of areas, equipment, surfaces and utensils.
- ✓ Weekly microbiological check of equipment, utensils and the hands of personnel. With count of total aerobes, enterobacteria and *Listeria monocytogenes* to verify proper cleaning and disinfection.
- ✓ Detection of the presence of the SARS-COV-2 virus on product and packaging materials. The FAO/WHO has rated the associated risk as very low.

3 samples per week are taken at random:

- Product (meat/entrails)
- Packaging material: cardboard box
- Packaging material: plastic material

The analysis is carried out in an external laboratory, following the sample taking protocol. In the event of a positive result, it will be reported immediately, and the cleaning and disinfection plan will be stepped up.

e. MAINTENANCE OPERATIONS

1. The maintenance personnel have their own tools and in the event of sharing a tool, it will be disinfected with approved disinfectant before use.
2. Repairs to breakdowns inside the facilities will be made at the end of the day whenever possible. When there are no personnel working in that area. If the repair must be made during the working day, the personnel will wear the appropriate PPI and the safety distance of approximately 2 metres will be maintained.
3. After carrying out the maintenance tasks, the area, equipment and utensils must be cleaned and disinfected. Work will not resume until it is overseen by the Production Manager. The action and final decision are logged in the List of Breakdowns.

Date created: 13/03/2020 – Rev.6

Page 10 of 13

f. OPERATION AND MAINTENANCE OF AIR CONDITIONING AND VENTILATION SYSTEMS IN BUILDINGS AND ON OTHER PREMISES

The companies FRITECNO, S.L. and ITISA, S.L. are responsible for the maintenance of the air conditioning and ventilation system in our facilities.

In July 2020, they updated the conditions of use and maintenance in line with the operation and maintenance recommendations drafted by the Sub-directorate General for Environmental Health and Occupational Health, Sub-directorate General for Energy Efficiency and IDAE – Ministry for the Ecological Transition and the Demographic Challenge together with the Ministry of Labour and Social Economy.

A ventilation system has been put in place that guarantees air renewal alongside a maintenance, cleaning and disinfection protocol that is suitable for the characteristics and intensity of the equipment.

g. RECEIPT OF MATERIALS AND DOCUMENTATION

- 1- The receipt of packaging materials will be carried out while avoiding direct contact between the receiving person and the external company. The material received is unloaded at a bay exclusively designated for packaging materials. When it has gone through reception control and it is accepted, it is placed in the warehouse exclusively designated for packaging material and locked up.

It will only be handled by personnel using PPI and it is disinfected with hydro-alcoholic gel.

- 2- All suppliers are asked to send documentation electronically whenever possible.
- 3- In the administration reception, a line of tape has been placed on the floor to indicate where the external person should wait. In the case of delivery of packages to administration, they will be left in the designated area, collected by our personnel wearing PPI and disinfected with hydro-alcoholic gel.
- 4- Drivers who deliver documentation to us will do so at the offices. It will be collected by our personnel wearing gloves and using protective masks.

Date created: 13/03/2020 – Rev.6

Page 11 of 13

***h.* EXTERNAL PERSONNEL, ESSENTIAL SERVICES, VISITS**

In general, any type of visit to our facilities will be avoided as a preventative measure.
For this reason:

- Only those visits or services that are essential to guarantee the operation of our activity may enter our facilities.

To access the facilities:

- ✓ The use of mask is compulsory all the time (recommended FFP2)
- ✓ Safety distance will be respected during the visit
- ✓ Health questionnaire R15-03 and other documents will be filled out at the entrance
- ✓ Body temperature will be taken.

Access will be authorised if the questionnaire is correct and the body temperature is < 37.2°C; the same guidelines must be followed as for the entry control for our employees.

If the company considers it necessary, it may request an antigen test or PCR test with a negative result, to access into Carniques Celrà, SL. plant.

- Due to the dimensions of the meeting/visits room, the maximum capacity allowed in it could be limited and in order to guarantee a correct renewal of the air in the meeting room, an air purifier has been installed.
- In reception, a line of tape has been placed on the floor to indicate where the external person should wait to avoid contact with the visitor.

During the visit, we follow according to I-10-11, Instruction for visits and external inspections.

***i.* HOW TO ACT IN THE EVENT OF A POSITIVE CASE OF COVID-19**

In the event of a positive case of covid-19, the following medical instructions will be followed.

An investigation and monitoring of the work environment, which will include the tracking of work colleagues, accommodation and transport to the workplace, will be carried out.

Close contacts will be defined alongside the health authorities and they will be placed under quarantine. A return to work will not be permitted until medical discharge is obtained as well as a corresponding negative covid-19.

COVID-19 PREVENTATIVE ACTION PROTOCOL

Code: DOC-015-01

Date created: 13/03/2020 – Rev.6

Page 12 of 13

In the event of detecting an increase in significant cases, we will proceed in carrying out screening for a SARS-COV-2 test by sections, alongside the health authority, on a fortnightly basis. The regularity of this will change depending on the result.

6.-TRAINING AND COMMUNICATION

All company personnel, including new employees, will receive training on Preventive Protection Measures against the covid-19. This training is created and carried out by the Occupational Hazard Prevention Company Ergolaboris. Its effectiveness will be evaluated and recorded.

- Internal communication:
 - All personnel will be kept informed of the evolution of the pandemic and the internal decisions that may affect them through information posted on the announcement boards and in the dining room.
 - Internal instructions on hand washing and mask use will be placed on the changing room boards.
- External communication:
 - Clients: they will be informed immediately of any changes that may affect the transportation/delivery of their orders.
 - Suppliers: they are informed of entry restrictions at our facilities and they are only allowed to deliver material according to internal instructions.
 - General: the ban on entry to the company is stated.

7.-ARCHIVE

All registers generated by this procedure will be filed for a minimum of 3 years in the Quality Department.
